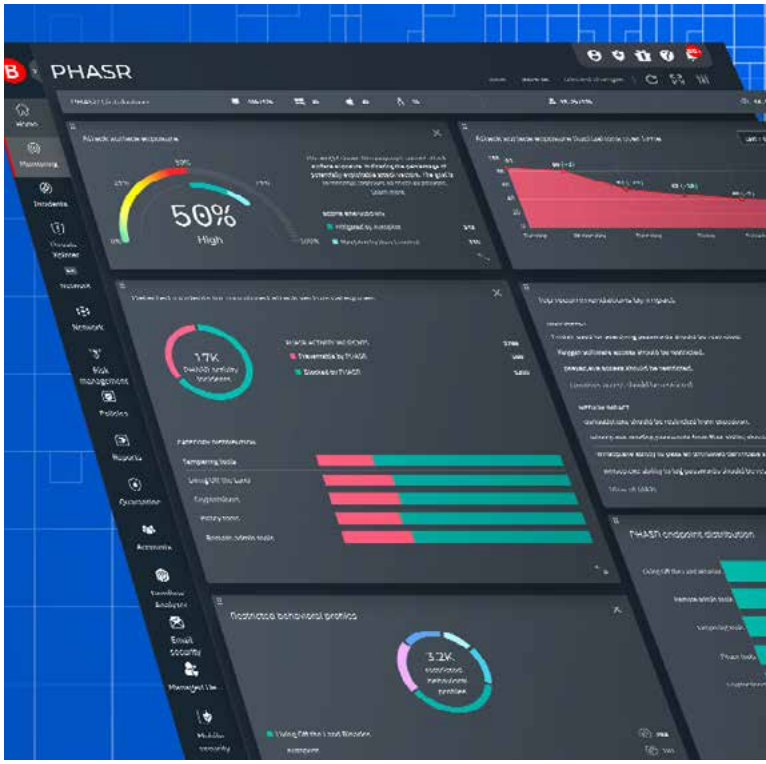
Bitdefender Internal Attack Surface Assessment

Get a free assessment that uncovers unnecessary access to powerful system tools attackers exploit every day.

Rather than deploying malware, today attackers use native tools such as PowerShell, or WMIC to blend in with normal system activity and avoid detection.



What the numbers show:

84% of attacks now abuse legitimate tools to evade detection.

Up to 95% of access to risky tools is unnecessary.

A fresh Windows 11 install contains 133 unique Living-off-the-Land Binaries that attackers can exploit.

Detection and response tools are slow and inefficient as teams struggle to discern the intent behind the abuse of legitimate utilities. Preventing attacks is possible by reducing the attack surface but organizations lack visibility into unnecessary risky tools and underestimate their risk exposure.

What you'll discover:

The complimentary **Bitdefender Internal Attack Surface Assessment** uses unique AI-driven technology to reveal and reduce your risk exposure – no disruption, no obligation, no added effort for your team.

The assessment enables you to:

↳ **Gain visibility into critical security gaps:** unnecessary access to system tools, Living-off-the-Land binaries, Remote Admin, Tampering Tools, Cryptominers, and Piracy Tools.

↳ **Uncover shadow IT** and unauthorized use of legitimate utilities

↳ **Understand your risk exposure score** and how vulnerable your organization is to modern attacks that abuse native tools

↳ **Benefit from Bitdefender expert insights** and recommendations to reduce risk

↳ **Automatically harden your systems and block modern ransomware** and other attacks before they begin by neutralizing the tools threat actors depend on.

DATASHEET

Bitdefender Free Internal Attack Surface Assessment

Bitdefender

How it works:

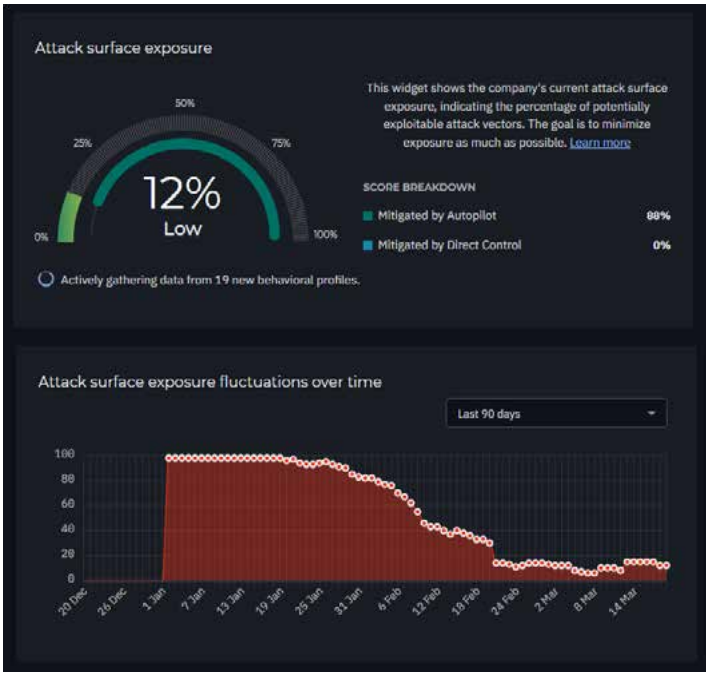
1. Assessment kickoff:
Bitdefender specialists deploy Bitdefender GravityZone Proactive Hardening and Attack Surface Reduction (PHASR) to identify risky and unnecessary tool usage.

2. Attack surface analysis:
Detailed dashboard with findings and actionable recommendations (day 30–35)

3. Attack Surface Reduction Sprint (Optional):
Restrict unnecessary tools without disrupting productivity

4. Impact measurement:
Track improvements and reduction in your attack surface (day 45)

Protect your organization before attackers exploit trusted tools.



Customer Attack Surface Reduction achieved on Autopilot using PHASR.

↳ **Request your Free Bitdefender Internal Attack Surface Assessment today.**
